A 5x20 grid of squares. The squares are filled with varying shades of gray, representing a 2D spatial distribution of data points. The distribution is sparse, with many squares being white (empty) and others containing a single gray square. The gray squares are scattered across the grid, with some clusters and some empty spaces.

A 6x20 grid of squares. The squares are arranged in rows. The first row has 19 squares, with the last square missing. The second row has 19 squares, with the last square missing. The third row has 19 squares, with the last square missing. The fourth row has 19 squares, with the last square missing. The fifth row has 19 squares, with the last square missing. The sixth row has 19 squares, with the last square missing.

A 5x20 grid of squares representing a sparse matrix. The squares are arranged in a pattern that suggests a banded structure with some additional non-zero elements.

The diagram consists of four horizontal rows of small squares. Each row contains 20 squares in total. The squares are arranged in a regular grid pattern. In each row, there are several squares that are filled with black ink, while the rest are white. The pattern of black squares varies slightly between rows.
